ORGANIC AND REGENERATIVE: NEW FRONTIERS FOR THE FUTURE OF SUSTAINABILITY

Regenerative agriculture represents one of the most promising frontiers of sustainable innovation today. Its holistic approach is revolutionizing not only food production but extends to other productive sectors, proposing a vision that integrates both food and non-food production. The lack of a unified definition of the term "regenerative" has highlighted the need to establish shared criteria to prevent potential greenwashing phenomena.

In response to this need, ICEA and IFOAM EU promoted a dialogue during the IFOAM World Congress 2024 in Taiwan, organizing the first world conference that brought together leading experts in organic and regenerative agriculture. This important meeting led to the drafting of the first harmonized global statement, approved by the IFOAM General Assembly, which resulted in the declaration "Elevating Truly Regenerative Agriculture – Statement from the Organic Movement" published on January 15, 2025.

The seminar aims to explore the declaration contents approved by IFOAM Assembly and to deepen the perspectives of regenerative agriculture in its natural dialogue with organic agriculture. The reflection will extend to the complementarity of the two approaches, highlighting how the integration of organic and regenerative principles is shaping a production system capable of responding to current sustainability challenges.

WELCOME REMARKS

Giuliano D'Antonio
ICEA Board Member
Delegate for External Relations

MODERATOR

Mariano Serratore
ICEA Technical Director

SPEAKERS:

Sarah Compson
IFOAM World Board
11:45-12:00

Paul Holmbeck
IFOAM World Board
12:00-12:15

Paul Alvarez
ROA Program Director
12:15-12:30

Ivo Degn
CEO & Co-Founder
Climate Farmers
12:30-12:45

Hanna Winkler
IFOAM Organics Europe,
Policy Associate Manager
12:45-13:00

Lisa Ketzer
Bioland, R&D, Sustainability
and Climate Protection
13:00-13:15
